EN ISO 20345 SAFETY SHOES

- S1** Safety shoes for professional use with toe caps designed to give protection against impact when tested at an energy level of 200 joules. Antistatic properties, energy absorption of seat region and closed heel
- S1 P** As S1 plus steel mid-sole
- S2** As S1 plus water resistance and water absorption of upper material
- S3** As S2 plus steel mid-sole and cleated outer sole

EN ISO 20347 OCCUPATIONAL SHOES

- 02** Footwear for professional use without steel toe caps. Resistance to oil, antistatic properties, energy absorption of seat region and closed heel plus water resistance and water absorption of upper material

TECHNOLOGIES

Bata industrials has focused its efforts and development to incorporate in their designs a series of technologies that aim to meet the needs of protection, comfort and health of workers today. Bata Industrials offers much more than a safety footwear, it offers more protection, more health, more in fit and more on quality.

TPU STRABILIZER

Device that works on the area of the Arch of the foot as stabilizer anti-torsion, improving stability and reducing fatigue.

BATA SHIELD

Diseñadas for work in conditions of high humidity, because they slow the entry of liquids to the inside of the footwear, and in turn allow the natural moisture from the foot outlet.

Flexible Anti Puncture

Anti perforantes templates more flexible, less fatigue by bending walking.

COMPOSITE TOE

Protects the toes against gives them us pair produced the fall of heavy objects, offers greater strength and light weight. Idea for extreme cold environments.

TECHNICAL INSOLE

Templates that reduce muscle fatigue, thanks to its ability to be moulded to the shape of the foot, providing a support more effective to the bow area.

FEATURES

Through our continuous innovation process we develop new features and designs which contribute to safety, comfort, vitality, durability and quality. Taking research from our worldwide network and client feedback we are continually developing new innovative designs and technologies.

TUNNELSYSTEM®

Every shoe in the Bata Industrials collection has its own unique combination of features. However, there is one innovation that sets every safety shoe from Bata Industrials apart: the ingenious Tunnelsystem®. This is a distinctive notch in the heel of the shoe which adjusts as the heel hits the ground, spreading the pressure over a larger surface area. What is unique about this system is that the wearers weight has no effect on the function. This built-in shock absorber spares the joints and keeps the wearer upright. Spreading the load also gives the heel extra stability, preventing fatigue and loss of concentration and so helps to avoid a great number of accidents.

ANTI-SLIP SOLES

It is crucial to select the right shoe sole for the right working environment. This depends greatly on the working surface, the amount of surface pollution in the work area and the tasks the worker has to perform. That's why Bata Industrials has developed several purpose made types of outer soles, each with its own profile. In order of slip resistance there are our: Dual density PU-sole, which is antislip and very light and flexible, QuattroTech® TPU-sole, which is anti-slip in all directions and TriTech Plus®, a sole manufactured using two densities of rubber. TriTech Plus® is extra wear-resistant and offers maximum protection against slipping, shards, oils, acids and heat (up to 300 degrees Centigrade). This means that we can provide the right grip on the work floor under all conditions, making the workplace safer.

CLIMATE MANAGEMENT

Bata Industrials uses the latest breathable materials for its footwear, such as innovative textiles and natural nubuck leather for the uppers. Inside we use the moisture absorbing Bata Cool Comfort®, Bata VentAir®, Bata Air Xtreme® and Dri-Lex® for the linings. These high-tech materials consist of different layers, which together ensure a soft, dry and fresh feel. While at the same time they effectively transport moisture to the outside of the shoe. The full benefits of climate management are experienced when wearing the right socks, socks which are also suited to the absorption and expulsion of heat and humidity. The Pro-guards® yarns in our socks are designed perfectly for this, another footwear development by Bata Industrials.

EASY ROLLING SYSTEM®

At Bata Industrials we understand that shoe comfort comes from many different elements. That's why we have developed the Easy Rolling System®, a small improvement with big advantages. By pre-forming the front of the shoe, the natural motion of the foot is supported in an optimum way. This allows for easier movement and uses less energy for the wearer. Reducing fatigue, saving energy and increasing comfort. All of which improves working lives.

LIGHTWEIGHT

In heavy duty footwear design, safety and comfort are usually contradictory concepts. Hard working safety boots by their nature are heavy. Bata Industrials shoes achieve the best balance between lightweight and durable, safe and sturdy shoes which are lightweight and comfortable. All our footwear is designed using the latest materials and aim to be as lightweight as possible.

Bickz®

BICKZ 301

ARENA

ARENA - L/C

UPPER : SMOOTH LEATHER
LINING : NATURAL LEATHER
COLORS : BLACK
SOLE : PU DD
SIZE : 5/11

Light and flexible safety shoes made of high quality leather, with a double density polyurethane sole. Excellent resistant to oil and their derivatives. Its also includes new tunnel system technology.

CHARACTERISTICS

- High strength, abrasion resistant & breathable chrome tan smooth leather
- Light weight shoe that provides optimum safety and comfort
- Reduces the loss of concentration due to fatigue at work floor
- Double density PU sole
- Lighter density for mid sole and higher density for out sole will provide extra cushioning effect and comfort.
- Heat activated thermoplastic counter stiffener that offers excellent shoe shape
